

quick-fit pulley

quick-fit pulley

Think SAFETY! - no more climbing on frames!

Our new pulley frames are designed with safety in mind

The idea behind the design is to stop the need for operatives climbing onto the sandbag bars to open or close the top toggles.

A worker was injured when he slipped off the sandbag bar on a quick-fit frame. He landed on a Z-post causing a serious injury to his calf. Luckily he did not fall into the fast lane of the motorway he was working on!

The system works with your existing plates which are drilled to fit the quick-fit system (plates require hinging).

Your existing frames can also be adapted: either by yourselves after purchasing an adaption kit, or we can fit the system for you.

Easily modify your existing quick-fit frame with our components:

Floating bar with toggles for sign attachment plus rope fixings

Two pulleys for mounting on top of the frame

Two rope securing cleats

The pulley frame allows for easy opening and closing of signs.

Shown is the standard (1200mm) quickfit size. Also available in 900mm, WBM and Jumbo sizes
