

# Stamark line markings

## 3M Stamark line markings

### Permanent & temporary road line markings

3M's new Stamark tape is easy to apply, with excellent performance.

#### Permanent markings:

**A380** - A high performance road marking tape suited to permanent long line applications. It has long life retroreflectivity (up to 8 yrs) using high index ceramic beads, and a raised profile to improve wet reflectivity & skid resistance. Available in white.

**A310AWS** - A permanent quality marking tape used for patching & repair work. Ceramic beads & anti-skid particles ensure visibility & safety for drivers. Available in both white & yellow.

#### Temporary markings:

**A710** - Used in temporary road works situations to delineate new lanes. Reflective even when submerged in water, ensures excellent delineation in all weathers. Has an embedded net to increase durability & aid removal. Leaves no damage or lasting trace after removal. Available in both white & yellow.

**A715** - A black version of the above A710, used to temporarily blank off existing road markings in temporary traffic management situations. Matt colour reduces glare in wet/sunny locations. Will adhere to most surfaces, including existing lines. Embedded skid particles & structured profile provides good skid resistance. Leaves no damage or lasting trace after removal.
